## PREFACE

It is our pleasure to welcome you to KOMPEGE 2018 (IV. International Ege Composite Materials Symposium) organized by Ege University Faculty of Engineering that took place on September 06-08, 2018 Izmir, Turkey.

The first KompEGE I (17-19 November 2011) and second KompEGE II (7-9 November 2013) and KompEGE III (5-7 November 2015) were held in Kusadasi organized by Ege University Faculty of Engineering.

The symposium provided a platform to bring together academicians, researchers, industrialists, practitioners and other related experts from home and abroad to share knowledge and experiences, which promoted intellectual and practical development in the all field of Technology, Engineering and Science.

KOMPEGE 2018 at the Bioengineering Department of Engineering Faculty at Ege University took place for three days, with more than 550 scientists including countries Japan, Germany, Greece, Iran, Poland, India and Turkey. They discussed current technology and science of composite materials and production.

In KOMPEGE 2018, 132 posters were presented while 173 oral presentations were discussed. In addition, 6 very special subject talks were done by invited speakers. Beside of this, 10 panellists discussed the current composite technology and related problems in two different panels.

Finally, on behalf of the KOMPEGE 2018 Organizing Committee, we would like to express our appreciation to all the participants for taking time out of your busy duties to attend the Symposium.

We would like to thank all academicians, researchers, industrialists, practitioners and other related experts. We would also like to thank our sponsors BMC Automotive Industry and Trade Inc. and IMS Polymers.

Organizing Committee

## COMMITTEES

### Honorary President

Necdet BUDAK ..... Rector of Ege University

### Head of Organizing Committee

Rasim İPEK ..... Ege University

### Secretary of Organizing Committee

Ayşe NALBANTSOY ..... Ege University

### Organizing Committee

Cihat Okan ARIKAN ..... Ege University  
Deniz DURAN ..... Ege University  
Ege Anıl DİLER ..... Ege University  
Gökhan ZENGİN ..... Ege University  
K. Arzum ERDEM GÜRSAN ..... Ege University  
Mehtap GÜRBÜZ ..... Ege University  
Murat ELİBOL ..... Ege University  
Nalan KABAY ..... Ege University  
Nilay GİZLİ ..... Ege University  
Ninel ALVER ..... Ege University  
Özlem KIZILIRMAK ESMER ..... Ege University  
Sabriye YUŞAN ..... Ege University  
Serap CESUR ..... Ege University  
Şule AYTAŞ ..... Ege University

### Advisory Board

Bülent SANTIRCIOĞLU ..... BMC Automotive Industry and Trade Inc.  
Canan KANDİLLİ ..... Green Economy Research and Application Centre  
Erol DİVANYAN ..... Alkor Group  
Fatih Kemal ÖZTÜRK ..... Ministry of Science and Technology  
Fatma YURT LAMBRECHT ..... Ege University  
Günnur KOÇAR ..... Ege University  
Hasan MANDAL ..... TUBITAK  
Hasan YILDIZ ..... Ege University Science and Technology Centre  
İsmail Hakkı HACIALİOĞLU ..... Composites Manufacturers Association  
Mustafa GÜDEN ..... Izmir Institute of Technology  
Suna TİMUR ..... Ege University  
Süheyda ATALAY ..... Ege University  
Şebnem TAVMAN ..... Ege University

## Scientific Committee

Adil DENİZLİ .....	Hacettepe University .....	Turkey

## CONTENTS

PREFACE .....	i
COMMITTEES .....	ii

### ABSTRACTS OF INVITED SPEECHES

CHARACTERISATION OF HIGH PERFORMANCE COMPOSITES WITH SPECIAL REFERENCE TO THE INTERFACE SUBSTRATE/RESIN MATRIX — NANO INTERFACE HAS MEGA ROLE IN THE COMPOSITES ARCHITECTURE .....	2
NANOPARTICLE-WEBBED HYBRID HYDROGELS .....	3
COMPOSITES IN NEW APPROACHES FOR SELECTIVE SEPARATION.....	4
NANO-ENGINEERED COMPOSITE ELECTROSPUN POLYMERIC MEMBRANES FOR DESALINATION AND WATER TREATMENT .....	5
NANOCOMPOSITE THIN FILMS AND COATINGS .....	6
BIOLOGICAL INTERACTIONS WITH MATERIAL SURFACES.....	7

### ABSTRACTS OF ORAL PRESENTATIONS

ANTIBACTERIAL EFFECT OF CARBON-BASED NANOMATERIALS: AN IN VITRO STUDY .....	9
APPLICATIONS OF THERMOSET COMPOSITES FOR STRUCTURAL PARTS IN AUTOMOTIVE INDUSTRY.....	10
CATALYTIC ACTIVITY OF REDUCED GRAPHENE OXIDE BASED BIMETALLIC NANOCOMPOSITES .....	11
CHITOSAN-CARBON NANOFIBER MODIFIED DISPOSABLE ELECTRODES FOR ELECTROCHEMICAL DETECTION OF HEPATITIS B VIRUS.....	12
COMPARATIVE FINITE ELEMENT ANALYSIS FOR DRIVE PLATE OF AUTOMOTIVE CLUTCH MADE COMPOSITE MATERIALS AND CONVENTIONAL STEEL.....	13
COMPARISON OF DIFFERENT FINITE ELEMENTS IN VIBRATION ANALYSIS OF CURVED COMPOSITE PLATES .....	14
CONFINEMENT OF IONIC LIQUIDS WITHIN SILICA NETWORKS TO PRODUCE IONOGELS .....	15
DESIGN AND ANALYSIS OF INTERPLY HYBRID LAMINATED COMPOSITE FOR MAXIMUM NATURAL FREQUENCY AND MINIMUM COST USING RANDOM SEARCH ALGORITHM AND FINITE ELEMENT METHOD.....	16
DETERMINATION OF FIRST NATURAL FREQUENCY OF ANNULAR PLATES USING MACHINE LEARNING ALGORITHMS .....	17
DEVELOPMENT OF A LEAF SPRINGS FROM CARBON FIBER REINFORCED PLASTIC MATERIAL.....	18
DEVELOPMENT OF A B-PILLAR FROM CARBON FIBER REINFORCED PLASTIC.....	19
DEVELOPMENT OF A CARBON FIBER REINFORCED POLYMER FRONT BUMPER BEAM .....	20
DEVELOPMENT OF CHITOSAN AND POLYCAPROLACTONE BASED TRI-LAYER BIOCOMPOSITE FILMS AS ACTIVE FOOD PACKAGING APPLICATIONS .....	21
DEVELOPMENT OF COMPOSITE DRIVE SHAFT FOR AUTOMOTIVE INDUSTRY .....	22
DYNAMIC COMPRESSIVE BEHAVIOR OF AN E-GLASS/POLYESTER COMPOSITE MATERIAL SUBJECTED TO REPEATED LOADS .....	23
EFFECT OF BALL MILLING TIME ON MICROSTRUCTURAL AND MECHANICAL PROPERTIES OF BIODEGRADABLE MG PREPARED BY HP-PM.....	24
EFFECT OF CURRENT TYPE ON SIC REINFORCED AG MATRIX NANOCOMPOSITE COATINGS BY ELECTRODEPOSITION .....	25
EFFECT OF NUT SHELL REINFORCEMENT ON SOLID PARTICLE EROSION BEHAVIOUR OF POLYPROPHELENE (PP) MATRIX COMPOSITES .....	26
EFFECT OF SYNTHETIC GRAPHITE AS A THERMAL CONDUCTIVE FILLER ON THERMAL AND MECHANICAL PROPERTIES OF POLYAMIDE 4.6 BASED COMPOSITE MATERIALS .....	27
EFFECT OF ZEOLITE ADDITION ON THE MECHANICAL AND THERMAL PROPERTIES OF BASALT FIBER REINFORCED PPS MATRIX COMPOSITES.....	28
EFFECTS OF SPECIMEN SIZE ON ALKALI ACTIVATED CEMENTS .....	29
ENHANCED PHOTOCATALYTIC DEGRADATION OF BISPHENOL-A WITH BORON OXIDE BASED COMPOSITE MATERIALS .....	30

ENHANCED THERMAL AND ELECTRICAL CONDUCTIVITY OF EPOXY COMPOSITES FILLED WITH SYNTHETIC GRAPHITE .....	31
EVALUATION OF THE EFFECT OF POLYMER CONCENTRATION ON THE PROPERTIES OF GELATIN/PVA COMPOSITE CRYOGELS .....	32
EXTRACTION AND SEPARATION STUDIES OF RARE EARTH ELEMENTS USING CYANEX 272 IMPREGNATED AMBERLITE XAD-7 RESIN .....	33
FABRICATION OF BISMUTH OXYCHLORIDE NANOCOMPOSITE WITH ENHANCED PHOTOCATALYTIC PERFORMANCE .....	34
FACILE SYNTHESIS OF MANGANESE-DOPED CARBON QUANTUM DOT/POLYANILINE (MN-CQDS/PANI) COMPOSITES VIA RAPID-MIXING POLYMERIZATION.....	35
GRAPHENE-AGAU-PANI NANOCOMPOSITE FOR SUPERCAPACITOR APPLICATION .....	36
GREEN SYNTHESIS AND CATALYTIC ACTIVITY OF GRAPHENE-CU-AG NANOCOMPOSITE.....	37
INVESTIGATION OF THE COLUMN PERFORMANCE OF CYANEX 272 AND D2EHPA IMPREGNATED RESINS FOR THE INDIVIDUAL SEPARATION OF RARE EARTH ELEMENTS .....	38
INVESTIGATION ON MECHANICAL, VISCOELASTIC, AND THERMAL PROPERTIES OF TERNARY CARBON (CARBON FIBER/GRAPHITE/ MULTIWALLED CARBON NANOTUBES) FILLED POLYPROPYLENE COMPOSITES.....	39
INVESTIGATION THE TRIBOLOGICAL AND THERMOMECHANICAL PROPERTIES OF WOOD-FLOUR AND BASALT FIBER REINFORCED POLY(LACTIC ACID) MATRIX HYBRID COMPOSITES.....	40
KINETIC MODELLING OF HEAVY METAL BIOSORPTION IN A FIXED BED COLUMN .....	41
MAGNETIC MODIFICATION OF AMBERLITE XAD-7HP RESIN FOR THE EFFECTIVE REMOVAL OF CHROMIUM IONS FROM AQUEOUS SOLUTIONS .....	42
MECHANICAL PROPERTIES OF SYNTHESIZED MULTI-WALLED CARBON NANOTUBE/POLYESTER COMPOSITE.....	43
MINERALIZED ELECTROSPUN GELATIN/CHITOSAN NANOFIBROUS COMPOSITES FOR BONE TISSUE ENGINEERING APPLICATIONS .....	44
OPTIMIZATION AND CHARACTERIZATION OF FATIGUE BEHAVIOR OF GLASS FIBER REINFORCED POLYMER MATRIX COMPOSITES.....	45
OPTIMIZATION OF POLY (NIPAM-CO-ITACONIC ACID) HYDROGELS .....	46
OPTIMUM DESIGN OF CARBON/EPOXY COMPOSITE LAMINATES FOR MAXIMUM FATIGUE LIFE .....	47
PHOTOTHERMAL PROPERTIES OF REDUCED GRAPHENE OXIDE- $Fe_3O_4$ -POLYANILINE NANOCOMPOSITE.....	48
POLY-L-LYSINE COATED NANOCERIA ON THEIR CELL VIABILITY AGAINST CANCEROUS AND HEALTHY CELLS IN VITRO .....	49
POLYMERIC MEMBRANES WITH MONOVALENT SELECTIVE LAYER FOR REVERSE ELECTRODIALYSIS.....	50
PREDICTION OF PHOSPHATE REMOVAL EFFICIENCY FOR THE HYDRATED FERRIC OXIDE-BASED NANOCOMPOSITE BY USING NON-LINEAR REGRESSION MODEL .....	51
PREPARATION AND ANTIBACTERIAL ACTIVITY OF POLYURETHANE / METAL ORGANIC FRAMEWORK NANOCOMPOSITE FILMS .....	52
PREPARATION AND CHARACTERIZATION OF AMINE HYBRID SILICA AEROGELS FOR $CO_2$ CAPTURE.....	53
PREPARATION OF SILICA SUPPORTED TITANIA PARTICLES USING LAYER-BY-LAYER ASSEMBLY TECHNIQUE.....	54
PREPARATION OF NANOSTRUCTURED BINARY OXIDES AND EVALUATION OF CATALYTIC ACTIVITY.....	55
RHODAMINE-B REMOVAL PERFORMANCE OF NANO- $TiO_2$ INTEGRATED ALGAL BIOCOMPOSITE IN A FIXED-BED COLUMN .....	56
SEISMIC RESPONSE OF COMPOSITE SUBSEA FLOWLINE SUBJECTED TO EXTREME LEVEL EARTHQUAKE .....	57
SODIUM ALGINATE AND FUNCTIONALIZED GRAPHENE COMPOSITE HYDROGEL FOR ADSORPTION OF NEODYMIUM .....	58
SOLID STATE RECYCLING: MICROSTRUCTURE AND WEAR PROPERTIES OF HOT PRESSED AA7075 / $Al_2O_3$ COMPOSITES .....	59

STACKING SEQUENCES DESIGN OF THE CYLINDRICAL COMPOSITE PRESSURE VESSEL FOR DIFFERENT CARBON/ EPOXY MATERIALS BY USING STOCHASTIC OPTIMIZATION METHODS.....	60
SYNTHESIS OF BIO-BASED POLYURETHANE FILMS USING VEGETABLE OIL BASED HYBRID POLYOLS .....	61
SYNTHESIS OF CELLULOSE BASED ALCOGEL AND AEROGEL FROM PINEAPPLE PEEL .....	62
TEXTILE FIBER REINFORCED COMPOSITES USED IN PACKING INDUSTRY .....	63
THE EFFECT OF $Fe_2O_3$ SUPPLEMENT ON CHARACTERISTICS OF ZINC OXIDE-CARBON NANOTUBE COMPOSITE.....	64
THE EFFECT OF GRAPHENE NANOPATELETS ON FAILURE LOAD OF ACRYLIC ADHESIVE FOR ALUMINUM POLYPROPYLENE JOINING .....	65
THE EFFECT OF PTFE CONCENTRATION ON THE WEAR MECHANISM OF ELECTROLESS NI-B-P COATINGS .....	66
THE FEASIBILITY STUDY OF HP-RTM MANUFACTURABILITY OF THICKER FIBER REINFORCED COMPOSITE .....	67
THE INVESTIGATION OF DYNAMIC STRESS EQUILIBRIUM OF CONCRETE AT HIGH STRAIN RATES .....	68
THE PREPARATION AND CHARACTERIZATION OF WOOD/LUFFA FIBER FILLED COMPOSITES FROM RECYCLED PLASTICS .....	69
THE SYNTHESIS OF POLYSACCHARIDE BASED HYDROGEL FROM WASTE CORNSTALK FOR PACKING MATERIAL .....	70
THERMO-MECHANICAL PROPERTIES OF 3D PRINTED BORON CARBIDE NANOPARTICLE FILLED POLYMERIC STRUCTURES.....	71
THORIUM ADSORPTION ON $MnO_2$ -IMPREGNATED ACTIVATED CARBON .....	72
TRIBOLOGICAL AND THERMOMECHANICAL PROPERTIES OF BENTONITE AND CARBON FIBER REINFORCED PPS MATRIX COMPOSITES.....	73
USING BLACK CUMIN PULP AS A BIO-BASED FILLER WITHIN EPDM RUBBER .....	74
USING EGGSHHELL WASTE AS A BIO-BASED FILLER WITHIN EPDM RUBBER.....	75
VIBRATION ANALYSIS OF LARGE-DEFLECTED CURVED COMPOSITE PLATES USING DIFFERENT FINITE ELEMENTS.....	76

#### ABSTRACTS OF POSTER PRESENTATIONS

A NEW NON-LINEAR ESTIMATION ALGORITHM FOR THERMAL RESISTANCE OF COTTON FABRICS.....	78
A NOVEL POLYMER/MINERAL COMPOSITE: SYNTHESIS AND CHARACTERIZATION .....	79
A REVIEW OF COMPOSITES FROM LEATHER SOLID WASTES.....	80
A SIMPLE METHOD FOR TC-99M LABELING OF WHITE BLOOD CELLS .....	81
ANALYSIS OF LAMINATED COMPOSITE MATERIALS BY FINITE ELEMENT METHOD.....	82
APPLICATION OF SI-BASED PLASMA COATINGS ON LEATHER AT ATMOSPHERIC PRESSURE.....	83
BIODISTRIBUTION OF WHEY PROTEIN LABELED WITH TC-99M ON THE EXPERIMENTAL ANIMALS .....	84
BIOSORPTION STUDIES OF SAMARIUM ON CROSSLINKED CHITOSAN-GRAPHENE COMPOSITE.....	85
BLEACHING OF COTTON FABRIC WITH A NOVEL ECO-FRIENDLY BORON COMPOUND AS A BLEACH ACTIVATOR .....	86
CARBOXYLIC ACID FUNCTIONLIZED PS-DVB MICROBEADS FOR THE SORPTION OF ALUMINUM IN WATERS .....	87
CATALYTIC ACTIVITY OF NITROGEN DOPED REDUCED GRAPHENE OXIDE DECORATED WITH SILVER NANOPARTICLES .....	88
CHANGE OF CORROSION BEHAVIOR OF HOT PRESSED ALUMIX321 / SIC COMPOSITES DEPENDING ON THE SIC AMOUNT .....	89
CHARACTERIZATION OF BIOCOMPOSITE FILMS BASED ON WHEY PROTEIN ISOLATE AND CARRAGEENAN.....	90
CHARACTERIZATION OF NICKEL-PHOSPHORUS-BORON-BN COMPOSITE COATING PRODUCED BY ELECTROLESS PLATING .....	91
CHITOSAN/MAGNETIC NANOPARTICLE COMPOSITES AND THEIR APPLICATION IN MAGNETOPHOREIC HARVESTING OF MICROALGAE .....	92

COLOR CHANGING ON GAINED FLAME RETARDANT SEMI-VEGETAL UPHOLSTERY LEATHERS BY TRIBUTYL PHOSPHATE .....	93
COLOR CHANGING ON GAINED FLAME RETARDANT CHROME TANNED SHOES UPPER LEATHERS BY TRIBUTYL PHOSPHATE .....	94
COMPARISON OF MODIFICATION TECHNIQUES OF CARBON NANOTUBES FOR EUROPIUM ADSORPTION .....	95
COMPOSITE CERAMIC MATERIALS IN NUCLEAR WASTE MANAGEMENT .....	96
COMPOSITE POLYSACCHARIDE NANOFIBERS BY ELECTROSPINNING TO PRODUCE WATER-INSOLUBLE STRUCTURES .....	97
CROSSLINKED CHITOSAN-GELATIN-HYDROXYAPATITE NANO-BIOCOMPOSITE PREPARATION AND CHARACTERIZATION FOR BONE TISSUE ENGINEERING .....	98
DESALINATION BY COMPOSITE ION EXCHANGE MEMBRANE BASED BIPOLAR MEMBRANE ELECTRODIALYSIS FOR ACID AND BASE PRODUCTION .....	99
DESIGN AND ANALYSIS OF FLAT FOAM CORE SANDWICH PANELS FOR MAXIMUM FUNDAMENTAL FREQUENCY .....	100
DESIGN OF <sup>99m</sup> Tc RADIOLABELLED POLYMERIC NANOPARTICLES, CHARACTERIZATION AND <i>IN VITRO</i> STUDIES .....	101
DEVELOPMENT AND CHARACTERIZATION OF ZIRCONIUM OXIDE AND PALLADIUM NANOPARTICLE COMPOSITE ELECTRODES AND INVESTIGATION OF THEIR ELECTROCATALYTIC APPLICATIONS .....	102
DEVELOPMENT OF COMPOSITE CERAMIC MATRIX FOR ALTERNATIVE RADIATION SHIELDING MATERIALS .....	103
DEVELOPMENT OF PULSED DEPOSITED MANGANESE AND MOLYBDENUM OXIDE SURFACES DECORATED WITH PLATINUM NANOPARTICLES AND THEIR CATALYTIC APPLICATION FOR FORMALDEHYDE OXIDATION AND OXYGEN REDUCTION .....	104
DIELECTRIC PROPERTIES OF THE SODIUM FLUORIDE DOPED TALC MINERALS .....	105
EFFECT OF DIFFERENT PLASTICIZERS ON THE PHYSICAL PROPERTIES OF FILMS BASED ON COLLAGEN HYDROLYSATE DERIVED FROM LEATHER TRIMMINGS .....	106
EFFECT OF PLASTICIZER ON PROPERTIES OF GELATIN BASED COMPOSITE FILMS .....	107
EFFECT OF SIC RATIO ON SIC REINFORCED AG MATRIX NANOCOMPOSITE COATINGS BY ELECTRODEPOSITION .....	108
EFFECT OF SINTERING TIME ON MECHANICAL PROPERTIES OF MG/B <sub>4</sub> C METAL MATRIX COMPOSITES PRODUCED BY HOT PRESSING .....	109
EFFECT OF SURFACTANT CONCENTRATION ON NI-P-B-TIO <sub>2</sub> COMPOSITE COATINGS PRODUCED BY ELECTROLESS PLATING TECHNIQUE .....	110
EFFECT OF WOOD WASTE FILLER ON MECHANICAL AND THERMO-MECHANICAL PROPERTIES OF POLYPROPYLENE .....	111
ESSENTIAL OIL INCORPORATED COMPOSITE COATINGS FOR FOOD PACKAGING APPLICATIONS .....	112
ESTIMATION OF PB(II) AND CU(II) REMOVAL EFFICIENCY BY USING NON-LINEAR REGRESSION MODEL .....	113
EXTRACTION AND SEPARATION STUDIES OF RARE EARTH ELEMENTS USING CYANEX 272 IMPREGNATED AMBERLITE XAD 16 RESIN .....	114
FABRICATION, CHARACTERIZATION AND CATALYTIC APPLICATIONS FOR DISSOLVED OXYGEN OF PALLADIUM DECORATED COPPER MOLYBDENUM OXIDE MODIFIED GLASSY CARBON ELECTRODE .....	115
FASILE PREPARATION METHOD OF P-CONJUGATED POLYMER COMPOSITE WITH CELLULOSE NANOFIBER AND SILICA MICRO SPHERE .....	116
FILLER AND INITIATOR EFFECT ON PROPERTIES OF UNSATURATED POLYESTER COMPOSITES .....	117
FORMULATION OF AN ALGINATE-SILICA HYBRID HYDROGEL FOR BIOCATALYTIC CONVERSION WITHIN A MICROFLUIDIC PLATFORM .....	118
FROM LAB TO INDUSTRY: A JOURNEY OF DIFFERENT RENEWABLE RESOURCES FOR CHITIN-CHITOSAN BASED BIOCOSMOSIS MATERIALS .....	119
GAS BARRIER PROPERTIES OF PLA/SILICA NANOCOMPOSITE FILMS .....	120
GELATIN BASED COMPOSITE FILMS FOR FOOD PACKAGING APPLICATIONS .....	121
GEMCITABINE LOADED SPION-PLGA NANOPARTICLES: SYNTHESIS, CHARACTERIZATION AND RADIOLABELING STUDIES .....	122
GRAPHENE OXIDE-Fe <sub>3</sub> O <sub>4</sub> -POLYPYRROLE TERNARY NANOCOMPOSITE FOR USNIC ACID LOADING AND RELEASE .....	123

HIGH GENERATION DENDRIMER FUNCTIONALIZED ELECTROSPUN NANOFIBERS .....	124
HYDROXYAPATITE IS BIOMATERIALS: ITS CHEMICAL SYNTHESIS CHARACTERIZATION SHELL OF CYPRAEA ANNULUS .....	125
IMPROVED ESTIMATION OF IONIC CONDUCTIVITY FOR SOLID POLYMER ELECTROLYTE SYSTEM .....	126
INFLUENCE OF LAVENDER OIL CONCENTRATION ON THE MICROENCAPSULATION PARAMETERS OF COLLAGEN HYDROLYSATE-WALLED MICROCAPSULES .....	127
INFLUENCE OF USING SIC OR AL <sub>2</sub> O <sub>3</sub> FRONT LAYERS ON THE HIGH SPEED IMPACT PERFORMANCE OF A BAINITIC STEEL.....	128
INJECTABLE HYDROGELS FOR MICROFLUIDIC APPLICATIONS.....	129
INTERCALATION OF CLAY MINERALS WITH AN ANTIBACTERIAL AGENTS FOR ELECTROSPUN NANOFIBERS .....	130
INVESTIGATION OF CHARACTERIZATION OF PERLITE FROM AEGEAN AREA (TURKIYE) MODIFIED WITH N,N-DIETHYL ETHANOL AMMONIUM CHLORIDE (DAC) .....	131
INVESTIGATION OF CHITOSAN NANOPARTICLES BEARING RADIOLABELLED – CEFPODOXIME PROXETIL FOR NUCLEAR IMAGING POTENTIAL OF INFECTION.....	132
INVESTIGATION OF DIATOM AND ALGINATE COMPOSITES AS A BIOINK FOR 3D BIOPRINTING .....	133
INVESTIGATION OF HYBRID PLY EFFECT ON BURST PRESSURE PERFORMANCE OF COMPOSITE OVERWRAPPED PRESSURE VESSELS.....	134
INVESTIGATION OF THORIUM ADSORPTION ONTO MWCNT-MNO <sub>2</sub> BY USING CENTRAL COMPOSITE DESIGN .....	135
IONIC LIQUIDS BASED COMPOSITE MODIFIED ELECTRODES DEVELOPED FOR ELECTROCHEMICAL DETECTION OF DRUG-DNA INTERACTION .....	136
IRON OXIDE NANOPARTICLE REINFORCED SELF-ASSEMBLED PEPTIDE GEL PRODUCTION AND CHARACTERIZATION.....	137
MATERIAL CHARACTERIZATION OF UNDOPED AND CO DOPED ZNO PHOSPHOR BY WET CHEMICAL METHOD.....	138
MORPHOLOGY AND CORROSION STUDIES OF CNT REINFORCED ELECTROLESS NI-W- B-P COMPOSITE COATING.....	139
NANOPOLYMERIC SYSTEMS FOR THE CONTROLLED RELEASE OF TEA TREE OIL .....	140
NICKEL OXIDE AND ZINC OXIDE HAVE ANTIBACTERIAL ACTIVITY AGAINST PATHOGENIC BACTERIA .....	141
NOVEL BIOPOLYMER RESOURCES: CHITIN FROM APILARNIL WASTE AND MUSHROOM .....	142
PD-BASED COMPOSITE MEMBRANES FOR HYDROGEN SEPARATIONS.....	143
PERMANENT SURFACE DEFORMATION ON LIGHT-RESPONSIVE LIQUID CRYSTAL POLYMER NETWORK DROPLETS .....	144
POLY(LACTIC ACID) BASED SEAWEED BIOCOMPOSITES: MECHANICAL AND THERMAL PROPERTIES.....	145
POROSITY OF PARTICLE REINFORCED METAL MATRIX NANOCOMPOSITES.....	146
PREPARATION AND CHARACTERISATION OF CHITOSAN AND GUNLUK GUM HYDROGEL CROSS LINKED BY GLUTARALDEHYDE .....	147
PREPARATION AND CHARACTERIZATION OF NEW TYPE BIOPOLYMERIC COMPOSITES BASED ON OLIVE POMACE AND MAGNETIC OLIVE POMACE .....	148
PREPARATION AND CHARACTERIZATION OF SILVER-DOPED HYDROXYAPATITE FROM SEASHELL BY DIFFERENT METHODS .....	149
PREPARATION AND CHARACTERIZATION OF WOLLASTONITE- POLYMETHYLMETHACRYLATE ARTIFICIAL BONES .....	150
PREPARATION AND CHARACTERIZATION OF IRON– OLIVE STONE ACTIVATED CARBON COMPOSITES WITH TWO DIFFERENT METHOD .....	151
PREPARATION AND OPTIMIZATION OF PCL/PAA ELECTROSPUN NANOFIBERS .....	152
PREPARATION OF BIOCOMPOSITE MATERIAL USING CHITOSAN-ALOE VERA-SILVER NANOPARTICLES SYNTHESIZED IN CENTAURY PLANT EXTRACT AND THEIR SYNERGISTIC ACTIVITES ON TEXTILE INDUSTRY .....	153
PREPARATION OF HYDROXYAPATITE BIOMATERIALS FOR BENZOIC ACID DELIVERY FROM SCOTCH BONNETS SEASHELL BY MICROWAVE PROCESSING .....	154
PREPARATION OF PCL/SILVER NANOPARTICLES NANOFIBERS BY ELECTROSPINNING METHOD .....	155
PREPARATION OF POLYMER MICROSHERES WITH WRINKLED HARD SURFACES COMPOSED OF SILICA NANOPARTICLES .....	156

PREPARATION OF SILICA AEROGELS FROM RICE HUSKS, INVESTIGATING THE PERFORMANCES OF THESE MATERIALS IN PETROLEUM REMOVAL .....	157
PREPARATION OF SiO <sub>2</sub> -EPOXY BASED COMPOSITE FOR OBTAINING A HYDROPHILIC LEATHER.....	158
PREPARATION OF THE SILICA AEROGEL-FELT COMPOSITES AS A POTENTIAL INSULATING MATERIAL .....	159
PRODUCTION AND CHARACTERIZATION OF METAL DOPED-SILICA AEROGELS .....	160
PRODUCTION AND CHARACTERIZATION OF HYDROXYAPATITE-WOLLASTONITE-MAGNESIA BIOCOSMOSITE .....	161
PROPERTIES OF POLY(L-LACTIC ACID) FILMS WITH ZEOLITIC IMIDAZOLATE FRAMEWORK-8 (ZIF-8) CRYSTALS .....	162
<sup>99m</sup> Tc RADIOLABELED ZOLMITRIPTAN NANOPARTICLES: SYNTHESIS, CHARACTERIZATION AND IN VITRO EVALUATION.....	163
RECOVERY OF LA(III) IONS FROM AQUEOUS SOLUTIONS BY MAGNETIC NANO GRAPHENE OXIDE COMPOSITE (MNGO).....	164
SAMARIUM ADSORPTION ONTO MODIFIED CARBON NANOTUBES BY EXPERIMENTAL DESIGN TECHNIQUE.....	165
STRUCTURAL AND CORROSION PROPERTIES OF TIN REINFORCED ELECTROLESS NI-W-B-P COMPOSITE COATINGS.....	166
SYNTHESIS AND CHARACTERIZATION FDG-SPIO (FLORODEOXYGLUCOSE CONJUGATED SUPERPARAMAGNETIC IRON OXIDE) NANOPARTICLES AS THERANOSTIC .....	167
SYNTHESIS AND CHARACTERIZATION OF GO-Fe <sub>3</sub> O <sub>4</sub> -PPY; PHOTOTHERMAL PERFORMANCE .....	168
SYNTHESIS AND CHARACTERIZATION OF GRAPHENE QUANTUM DOTS .....	169
SYNTHESIS AND CHARACTERIZATION OF POLYACRYLAMIDE-VERMICULITE COMPOSITE ADSORBENT .....	170
SYNTHESIS AND CHARACTERIZATION OF AUFH HYBRID NANOPARTICLES .....	171
SYNTHESIS OF AUFH NANOPARTICLES AND <i>IN VITRO</i> EFFICIENCY ON ADENOCARCINOMA CELLS.....	172
SYNTHESIS OF PLANT-DERIVED EUGENOL CONJUGATED WITH SILVER NANOPARTICLES (EUG-AGNPS) AND <i>IN VITRO</i> DETERMINATIONS .....	173
SYNTHESIS OF PLATINUM AND TITANIUM BASED NANOCONJUGATE FOR PROSTATE CANCER.....	174
TESTING OF CLAYS AS AN ANTI-CANCER DRUG DELIVERY MATERIAL FOR ORAL CHEMOTHERAPY .....	175
TEXTILE WASTE WATER TREATMENT USING BORON NANOMATERIAL BASED ADSORBENT.....	176
THE EFFECT OF ZINC METHACRYLATE ON ACCELERATED WEATHERING PROPERTIES OF OF ACRYLIC BINDERS .....	177
THE INNOVATIONS IN NATURAL FIBER REINFORCED COMPOSITE MATERIALS USED IN AUTOMOTIVE INDUSTRY .....	178
THEORETICAL MODELING OF THERMAL CONDUCTIVITY OF ALUMINA/SILICONE RUBBER COMPOSITES .....	179
THERMAL DEGRADATION KINETICS OF THE POLYGLYCOLIDE/CLAY NANOCOMPOSITES.....	180
UPTAKE OF LANTHANUM BY COMPOSITE ALGINATE MICROCAPSULES ENCLOSING INORGANIC MATERIAL AND ORGANIC EXTRACTANT.....	181
USE OF GELATIN-CHITOSAN COMPOSITE EDIBLE FILMS IN ACTIVE FOOD PACKAGING .....	182
USE OF GELATIN-GUM ARABIC BASED POLYMERS IN FOOD PACKAGING.....	183
VOLTAMMETRIC NUCLEIC ACID DETECTION BASED ON CARBON NANOTUBES COMPOSITE MODIFIED BIOSENSOR .....	184
WEAR PERFORMANCE OF THE WC-NI COMPOSITE HARDFACING COATING .....	185
ZIRCONIUM OXIDE BASED NANOCOMPOSITES SYNTHESIZED IN THE PRESENCE OF CARBON DOTS.....	186

## FULL TEXTS OF ORAL PRESENTATIONS

A NOVEL METHOD OF DETERMINING COMPRESSION AFTER IMPACT BEHAVIOR OF POLYMER COMPOSITES USING CORRUGATED CORE PROJECTILES: EXPERIMENTAL AND NUMERICAL INVESTIGATION .....	188
ADSORPTION AND CHARACTERIZATION OF MALACHITE GREEN ONTO CHESTNUT SHELL.....	198
APPLICATION OF IMIDAZOLIUM BASED IONIC LIQUIDS FOR THE PREPARATION OF HYBRID SILICA AEROGELS .....	207
ATTAPULGITE/FATTY ACID EUTECTIC MIXTURE AS FORM-STABLE BUILDING COMPOSITE FOR THERMAL ENERGY STORAGE .....	217
BIOCOMPATIBLE DELIVERY SYSTEM FOR METFORMIN: CHARACTERIZATION, RADIOLABELING AND <i>IN VITRO</i> STUDIES.....	226
BOLTED JOINTS IN THREE AXIALLY BRAIDED CARBON FIBRE/EPOXY TEXTILE COMPOSITES WITH MOULDED-IN AND DRILLED FASTENER HOLES .....	231

## **CHARACTERISATION OF HIGH PERFORMANCE COMPOSITES WITH SPECIAL REFERENCE TO THE INTERFACE SUBSTRATE/RESIN MATRIX — NANO INTERFACE HAS MEGA ROLE IN THE COMPOSITES ARCHITECTURE.**

*Dr. Amir Hussain*

*COMTECH GmbH Rohrauerstr. 70, 81477 Munich, Germany*

### **ABSTRACT**

For high performance composites, a precise knowledge of the substrate surface is of immense importance. Inorganic as well as organic substrates are often pretreated -- plasma, corona, silane coupling agent etc. -- before an adhesive is applied for bonding. Topography, wettability, chemical functionality and cleanness of the surface play very important role in the quality of adhesion. Each of these 4 factors plays a crucial role and the contribution of these factors to the quality and durability of the end-product composite is additive.

For accurate characterisation of the surface, advanced analytical techniques like AFM, ESCA and TOFSIMS have proved to be of great benefit. These modern tools have gone a long way in providing an insight into the surface / interface of the bonded materials and the main cause of adhesion failure. Contamination is one of the main enemies in industrial bonding; ESCA and TOFSIMS have proved to be very effective to identify and combat the enemy. The properties profile of the composites are investigated with the help of thermo-mechanical techniques like DSC / DMA.

Failure analyses of composites conducted by Comtech over 10 years point out in over 75 % of studies to the interface.

### ABSTRACT

Recently hybrid hydrogels with new class of crosslinking system have been attracting considerable attention because of their unique properties and wide range applicability in various fields. We have developed nanoparticle-webbed hybrid hydrogels in which the polymer network was multiply-crosslinked with silica nanoparticles (Web-GEL). This hybrid hydrogels were prepared in a facile manner involved simple mixing of an aqueous solution of a water-soluble copolymer having reactive side chains with an aqueous suspension of silica nanoparticles. The properties of hybrid hydrogels can be tuned very easily only by modulating the properties of copolymer (chemical structure and concentration) and nanoparticles (concentration). In this presentation, we will describe the following topics of the hybrid hydrogels.

1. Preparation of Web-GEL and their versatility.
2. Mechanical and swelling/de-swelling properties of Web-GEL.
3. Thermo-responsive Web-GEL and their application for drug release.
4. Preparation of microspherical hybrid hydrogels.

It is expected that the hybrid polymer hydrogels prepared according to the strategy presented in this paper will find applications in various fields such as the medical and pharmaceutical sciences and environmental and industrial technologies.

## COMPOSITES IN NEW APPROACHES FOR SELECTIVE SEPARATION

*Marek BRYJAK*

### ABSTRACT

A demand for new materials dedicated to separation processes has been developed last decades greatly. The supply cannot be completed by delivery of brand new separators as there is observed a stabilization in their production. History of polymers is the best example of that phenomenon - production of these commodities reached the value of 350 million metric tons several years ago and has not exceeded so far. In such situation, the search has focused on composites that merges properties of few components and creates new entities that, due to synergy effect, offer interesting features.

The lecture will be illustrated with examples showing the use of polymer composites in preparation of membranes, electrodes and sorbents. In the first case – coverage of membrane surface with grafted polymer and/or nanoparticles allowed to change surface character and made it hydrophobic or hydrophilic. The second approach for membrane modification was formation of stimuli responsible membranes that allowed to control permeation of lithium ions. In the case of electrodes preparation, composites of manganese oxide with titanium oxide will be presented for selective separation of lithium salts in the ion-pumping systems. Finally, preparation of core-shell sorbents useful for selective recovery of noble metals will be presented.

### **ABSTRACT**

Composite fibrous structures with nano-scale diameters offer a multitude of fascinating features, including large specific area and promising mechanical behavior for a wide range of applications. The large specific area also gives them high functionalization ability. There are different methods for generating composite nano-fibrous structures. However, among them electrospinning is rapidly emerging as a simple and versatile technique in which careful control of operating conditions and polymer solution properties enables the production of highly porous structures of nano-fibers. Electrospinning is a very promising technique by which polymer fibers with diameters ranging from a few nano-meters to several micro-meters can be produced using an electrostatically driven jet of polymer solution. Compared to conventional techniques for membrane fabrication, such as phase inversion, electrospinning allows the formation of three dimensional interconnected pore structure with uniform pore size and porosities  $\geq 90\%$ . As a result, nano-engineered composite fibrous membranes are increasingly being applied to many water treatment applications such as membrane distillation (MD) and pre-treatment of feed prior to reverse osmosis (RO) or nanofiltration (NF) processes by the removal of contaminants. In this presentation, the preparation and application of nano-engineered composite electrospun membranes for desalination and water treatment purposes are discussed.

## NANOCOMPOSITE THIN FILMS AND COATINGS

*Assoc. Prof. Cenk Aktas  
Christian-Albrechts-University  
Saarland University*

### ABSTRACT

For future and as well as today's technologies it is difficult to satisfy sophisticated requirements by using "a single material". Nanocomposites, which are basically composed of a host matrix and nanoscaled filler material(s), have emerged alternatives to overcome limitations of conventional single phase materials. In surface technologies used in wide application areas ranging from mechanical components to solar energy and from electronics to medicine, nanocomposite thin films and coatings provide various advantages.

This lecture will cover a brief review on functional nanocomposite thin films and coatings. In the first part basics of such surfaces including synthesis any analysis approaches will be briefly introduced. In the second part some case studies will be provided by giving examples of polymer-metal and metal-metal oxide nanocomposite thin films. The importance of interface and surface modification in nanocomposite and as well as other composite technologies will be discussed. Afterwards applications of nanocomposite thin films and coatings for several sectors including the aerospace, automotive, electronics and biotechnology industries will be presented.

## **BIOLOGICAL INTERACTIONS WITH MATERIAL SURFACES**

*Yannis Missirlis,  
University of Patras, Greece*

### **ABSTRACT**

When materials interact with biological entities, i.e. biomolecules, cells, bacteria, tissues, there is a considerable dynamic interaction resulting in responses of the biological part, partially determined by the surface properties of the materials.

The composition of the non-living material surface determines its physicochemical properties, including chemical groups, charge distribution, topographical features, mechanical properties, all of which are interrogated by the cells and bacteria that come into contact with it. The system (bio-nonbio) is dynamic, not only on its own, but because usually it is under external force fields, such as flow conditions.

A cascade of information at the biointerphase, part of which is referred as mechano-transduction, reaches into the nucleus of the cells and initiates a series of reactions, including gene expressions. In this presentation examples will be given on the role of topography, chemistry and mechanical signaling, emanated from the material surface, on the cellular and bacterial responses.

# THE ROLE OF MATRIX STRENGTH ON FLEXURAL BEHAVIOR OF HIGH TENACITY POLY-PROPYLENE FIBER REINFORCED ENGINEERED CEMENTITIOUS COMPOSITES (HTPP-ECC)

## ABSTRACT

Cement based composites such as concrete exhibit low flexural strength and are vulnerable to cracking due to their brittle structure. To overcome this weakness, different types of fibers are used as reinforcement. In this study, the effect of matrix strength on flexural performance of High Tenacity Poly-propylene (HTPP) fiber incorporating Engineered Cementitious Composites (ECC) has been investigated. Matrices with two different strengths were prepared. While the first matrix was consisted of a composition of cement and limestone (strong matrix); second matrix was consisted of 50% of fly ash substituted with cement (weak matrix). 25x60x300 mm sized samples were prepared from each matrix and water cured until testing. Four point flexural tests were conducted at 28 and 90 days. Strong matrix presented more favourable results in terms of flexural performance within the scope of this study. The first crack and flexural strengths of the composites prepared with the strong matrix were 2.45 and 7.91 MPa and for weak matrix these values were 1.06 and 4.01 MPa at 28 days, respectively. Also, the deflection capacity and toughness values of the composites prepared with the strong matrix were calculated as 6.52 mm and 6160 N.mm and for weak matrix they were 4.4 mm and 1901 N.mm at 28 days, respectively. At 90 days the enhancement for first crack strength, flexural strength, deflection capacity and toughness were 90%, 33%, 22% and 57% for strong matrix and %328, %99, %10 and %133 for weak matrix, respectively.

**KEYWORDS:** Matrix strength, ECC, HTPP, polymeric fiber, flexural strength

## 1. INTRODUCTION

Conventional concrete is the most common building material due to the availability of low cost raw materials used in its production process and ease of application. The most important advantage of concrete is its high compressive strength. However, concrete has very low tensile and flexural strengths compared to its high compressive strength. For this reason, it easily cracks under tensile and flexural stresses and loses its load carrying capacity (Daniel and Shah, 1994).

Maalej and Li (1994), noted that there were three types of tensile failure modes in cementitious composites: brittle, quasi-brittle and ductile behaviors. Brittle behavior can be observed in cement paste composites whereas concrete and most fiber-reinforced cementitious composites perform quasi-brittle behavior. At brittle behavior there is a sudden drop after first cracking at the stress-strain curve (Figure 1A). Quasi-brittle behavior can be seen at Figure 1B with strain softening after the first cracking. Ultimate tensile strength is equal to first crack strength at both brittle and quasi-brittle composites. Ductile behavior which is represented with C curve at Figure 1 can be characterized by strain hardening behavior after first cracking. These composites are called as strain-hardening cementitious composites and their ultimate strength is higher than their first crack strength. Engineered Cementitious Composites (ECCs) are unique kind of strain hardening cement-based composites produced by using a moderate volume of polymeric fiber (2% in general) (Li et al., 2003).

**Figure 21.** Three types of failure modes on cementitious materials

ECC is designed to exhibit multiple cracking behavior under flexural and tensile loads. At this point, composites with strain capacity 4% and very high toughness values can be produced (Li and Kanda, 1998). ECC also limits the crack width by increasing the number of cracks in the matrix due to the bridging effect of the polymeric fibers. By this way it is an ultra-ductile material that exhibits strain hardening under tensile loads (Fukuyama and Mikame, 1998). The multiple-crack behavior occurs when the load is transferred from cracked section to the other sections by the fibers. This behavior continues until the bridging capacity of fibers at one of the cracked section exceeded (Lin et al., 2014). Polyethylene (PE) was one of the first fiber type used in ECC (Lin et al., 2014). Polyvinyl alcohol (PVA) fibers have been preferred instead of PE to decrease the cost of production (Yang, 2008). Because of their high hydrophilic surface structure, PVA tend to break under tension loads when they used in ECC (Redon et al., 2001). Thus their performance is not fully used if their surface structure is not modified by oiling (Li, 1998). Recently, a new polymeric fiber named as high tenacity polypropylene (HTPP) is used

successfully for producing the ECC including various matrices (Felekoğlu et al., 2014; Tosun-Felekoğlu et al., 2017; Gödek et al., 2017; Keskinates and Felekoğlu, 2018). In order to facilitate multiple-cracking behavior of ECC fracture toughness of matrix should also be designed by taking the fiber properties into consideration (Li et al., 1995).

In this study, the effect of matrix strength to the flexural behavior of high tenacity polypropylene (HTPP) fiber reinforced ECC was investigated by using two different matrix type (strong and weak matrices). Four-point bending test were conducted to examine the flexural performances of composites prepared by using strong and weak matrices at both 28 (short term) and 90 (long term) days.

## 2. MATERIALS AND EXPERIMENTAL METHOD

CEM I 42.5R type cement is used in experiments and its physical and chemical properties were presented at Table 1. Limestone powder is used as micro-aggregate which has a specific weight of 2.69. F type fly ash is used in order to obtain different type of matrices. Chemical analysis of the fly ash is shown at Table 2. Polycarboxylate based super plasticizer is used in mixtures. Alkali resistant HTPP fiber is used as reinforcement and its properties were represented in Table 3.

**Table 9.** Physical and chemical properties of cement

Chemical Analysis (%)		Compressive Strength (MPa)	
SiO <sub>2</sub>	18.81	2 Days	29.90
Al <sub>2</sub> O <sub>3</sub>	4.65	7 Days	43.30
Fe <sub>2</sub> O <sub>3</sub>	3.33	28 Days	52.80
CaO	63.58		
MgO	1.30	<b>Physical Properties</b>	
Na <sub>2</sub> O	0.48	Specific gravity	3.10

Free CaO	1.71	Final setting time (min)	265

**Table 2.** Physical and chemical properties of fly ash

Component	Chemical Analysis (%)	Component	Chemical Analysis (%)
SiO <sub>2</sub>	55.49	CaO	2.43
Al <sub>2</sub> O <sub>3</sub>	18.72	MgO	4.57
Fe <sub>2</sub> O <sub>3</sub>	10.02	Na <sub>2</sub> O	0.51
K <sub>2</sub> O	1.66	Loss on ignition	1.3
SO <sub>3</sub>	0.38	Free CaO	0.17

**Table 3.** Physical properties of HTPP fiber

Specific gravity	Length (mm)	Diameter (µm)	Tensile strength (MPa)	Elastic modulus (GPa)	Elongation at rupture (%)
0.91	10	12	850-900	6	21

Two types of matrices were prepared with HTPP fiber and their mixture proportions were presented in Table 4. Weaker matrix incorporating fly ash and was labeled as WM whereas strong matrix was called as SM. Mixtures were prepared by a Hobart mixer. It has three different mixing sequence as 56 rpm (slow), 104 rpm (medium) and 185 rpm (high). Dry ingredients were mixed for 1 minute in slow speed than water was added and mixed 1 more minute at medium speed. Finally, HTPP fibers and super plasticizer were added and mixed 5 min at high speed. Mixtures were molded into 25x60x300 mm prismatic molds and covered with plastic bag in order to prevent plastic shrinkage cracking. After a period of one day, specimens were demolded and cured in water tank for 28 and 90 days.

**Table 4.** Mix proportions for SM and WM

(kg/m <sup>3</sup> )	SM	WM
Cement	854	378
Limestone powder	854	757
Fly ash	0	378
Water	380	399
Super plasticizer	16,8	12
HTPP fiber	18	18

Flexural tests were conducted with the four point bending test machine which had 6 kN capacity load cell. Test machine was at deformation control mode and rate was 0.5 mm per min and span length was 260 mm. Load-deflection curves were plotted by the test values. The very first breaking point of linearity at curves are taken into account as first crack strengths. Maximum flexural strength is calculated with the maximum point on curves and deflection value corresponding to that point also showed the deflection capacity of that sample. First crack and flexural strengths are calculated with  $PL/bh^2$  formula, here L is span length, b is cross section width, h is cross section height and P is first crack load for first crack strength or maximum load for flexural strength. Toughness values are computed by the area under the curve, which was between the first crack load and maximum load points. Crack number analyses are also conducted on samples after the flexural tests with hand-type optical microscope.

### 3. MECHANICAL PERFORMANCES OF THE COMPOSITES

#### 3.1 Discussion of Load-Deflection Curves

Load-deflection curves of SM and WM are shown in Figure 2 and 3, respectively. It was clear that the load carrying capacity of SM was better than WM both in short and long terms. Also aging enhanced mechanical properties of composites incorporating both matrices. Flexural performance enhancement was more apparent at WM. The possible reason is the late pozzolanic reaction process of fly ash with hydrated lime from cement, which contributes to the interfacial bonding between cement paste and polymeric fiber.

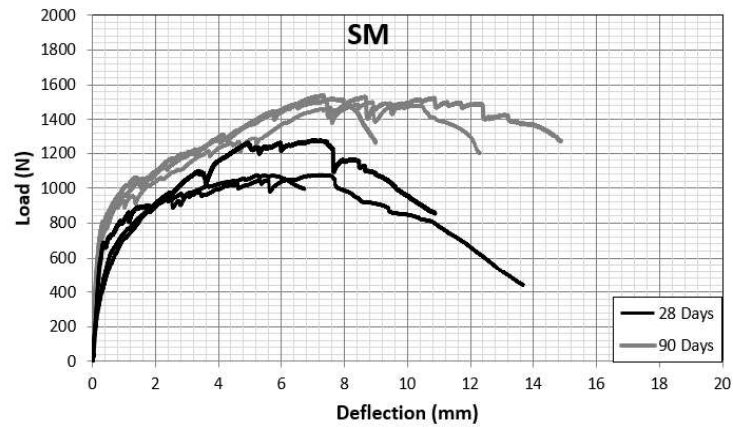

Figure 2. Load-deflection curves of SM

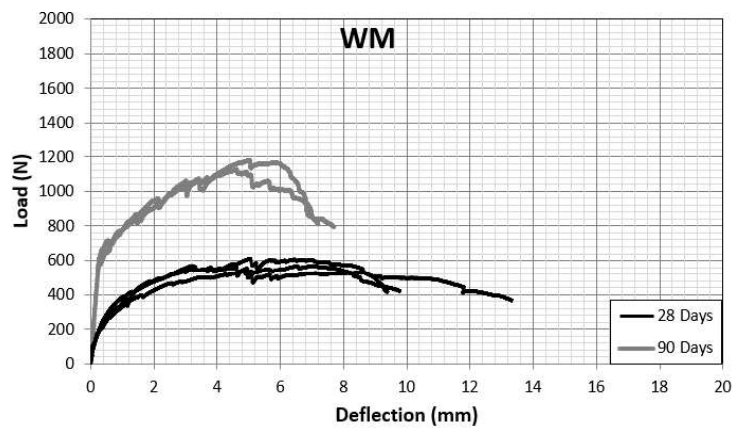

Figure 3. Load-deflection curves of WM

### 3.2. Discussion of First Crack and Flexural Strengths

The first crack and flexural strength values, which were obtained from load-deflection curves, are presented in Figure 4. Although the first crack strength of WM was lower than SM on 28 days, there were slightly no difference at long term. The flexural strength values were higher at both short and long terms for each series. The positive effect of curing was more obvious in WM than SM. When 90 days and 28 days of flexural performances were compared, there were 90% and 33% increase at first crack and flexural strengths of SM, respectively. This increment was 327% and 99% for first crack and flexural strengths of WM series. This result confirmed that bonding between fiber and matrix can be significantly improved at later ages if fly ash is used.

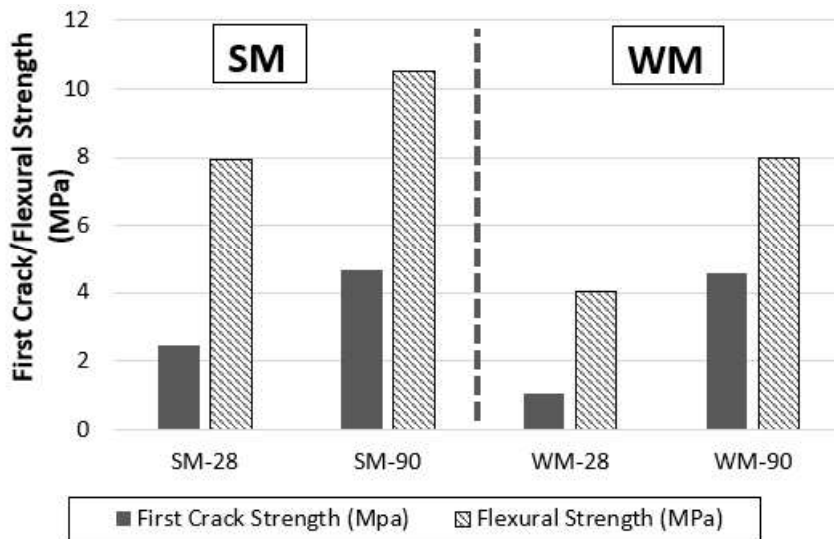

Figure 4. First crack and flexural strength values

### 3.3. Discussion of Toughness and Deflection Capacity

The toughness-deflection capacity and crack number-deflection capacity values of composites are shown in Figure 5 and 6, respectively. It was seen that both toughness and deflection capacity values were increased through the time (Figure 5). The toughness values of SM were 6160 and 9369 N.mm, on 28 and 90 days, respectively. These values were 1901 and 4424 N.mm for WM. The improvement of toughness and deflection capacity were more distinct for WM. Those changes in toughness and deflection capacity of WM through aging were 133% and 10% whereas they were 57% and 22% for SM, respectively.

Increased crack number value let the SM deform more easily and thus deflection capacity was also increased through the time. For ECC design, a brittle matrix is favorable to initiate cracking. From this point SM is more brittle at later ages and more suitable for multiple cracking compared to WM. Highest crack number values were obtained from SM at 90 days.

Figure 5. Toughness and deflection capacity values

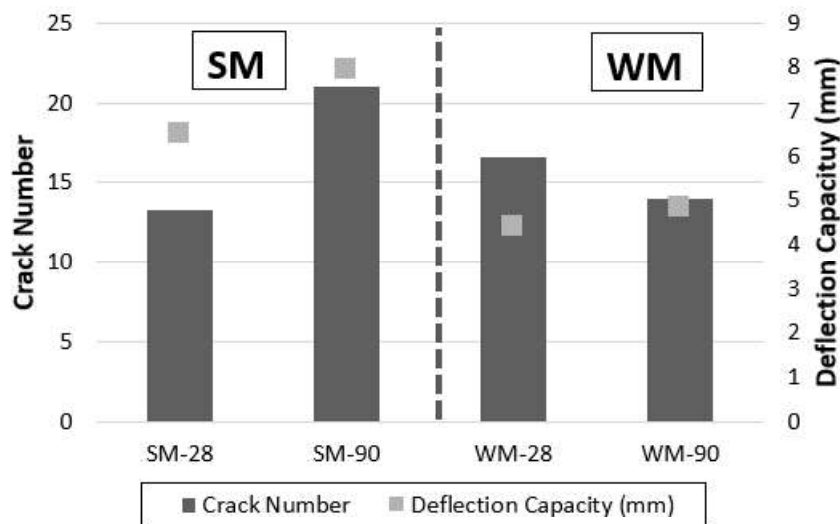

Figure 6. Crack number and deflection capacity values

#### 4. CONCLUSION

The results of this experimental study showed a strong matrix (SM) which is more brittle at later ages compared to weak matrix (WM) is more appropriate for HTPP-ECC design with improved flexural performance. Multiple cracking performance of SM is also improved at 90 days.

Aging has a significant impact on composites flexural performance if fly ash is employed in mix design. The possible reason is the late pozzolanic reaction process of fly ash with hydrated lime from cement, which contributes to the interfacial bonding between cement paste and polymeric fiber. Except the deflection capacity, the improvement

percentage increment of all mechanical properties (first crack strength, flexural strength and toughness) of WM composites were higher than composites with SM. As a suggestion, longer testing periods up to one year can be performed in order to observe if the flexural performance of fly ash incorporated matrix is further improved or not.
